

## INDESCRIBABLE

### VERSATILE

We offer the most optimal horseshoe stud with excellent grip for every situation, even the most difficult ground conditions.

## UNBELIEVABLE

### EFFECTIVE

The proven, high shock absorption of our studs protects the joints and the musculoskeletal system of the horse. And the increased slip resistance allows greater speed, ensuring that crucial fraction-of-a-second advantage on the way to victory.

## INCOMPARABLE

### SAFE

The GEKE Equigrip stud system with integrated disc spring and enlarged contact surface distributes impact forces uniformly over the horseshoe. This takes a considerable load off the M12 threads and guarantees extreme safety on the show-jumping course.

## UNBEATABLE

### VICTORIOUS

With Michael Jung we have a top event rider on our side. He has been using our horseshoe studs for years with great success. Sandra Auffarth, Kai-Steffen Meier, Emma Brüssau (pony), as well as Lars Nieberg, Hans-Dieter Dreher in show jumping, are further successful riders who use our horseshoe studs.

# GEKE EQUIGRIP

## *pony studs*

### MICHAEL JUNG STUD

Preferred for all-round terrain  
Spanner size: 14  
Grip height: 18 mm

### UNIVERSAL STUD

For all ground conditions  
Spanner size: 11  
Grip height: 8,12,18 mm

### GRASS STUD

Especially for grass-covered ground  
Spanner size: 11  
Grip height: 12 mm

### TRANSPORT STUD

Keeps out dirt and protects the thread

Thread: M 10

**GEKE Equigrip pony studs are not suitable for large horses!**

# GEKE EQUIGRIP HORSESHOE STUDS

Convincing performance through unbeatable shock absorption, optimal grip and unsurpassed safety. Designed for quality-conscious sports riders who place highest demands on the product.

## MICHAEL JUNG STUD

Preferred for all-round terrain  
Spanner size: 17  
Grip height: 22 mm

## UNIVERSAL STUD

For all ground conditions  
Spanner size: 13  
Grip height: 8, 10, 12, 18, 22 mm

## ICE STUD

For extremely hard ground and ice/snow  
Spanner size: 13  
Grip height: 8, 12 mm

## UNBEATABLE

GEKE Equigrip studs are the ideal horseshoe studs for professional sports riders, serious amateurs and individuals who insist on a high standard of safety, speed and health for their partner, the horse.

## H STUD

Preferred for deep terrain  
Spanner size: 13, 17  
Grip height: 18, 22 mm

## SAND STUD

For soft ground  
Spanner size: 17  
Grip height: 22 mm

## TRANSPORT STUD

Keeps out dirt and protects the thread

## GRASS STUD

Especially for grass-covered ground  
Spanner size: 13, 17  
Grip height: 18, 22 mm

## POINTED CONE STUD

Preferred for hard grassy pitch  
Spanner size: 13  
Grip height: 22 mm

## VERSATILE

GEKE Equigrip horseshoe studs are tightened accurately against the horseshoe (M12 thread) with a torque wrench at 28 Nm.

The advantages of this method:

The incredibly high impact forces (up to 7.5 tons) on the horse's legs are briefly cushioned at each landing, thus reducing the stress on the joints and musculoskeletal system of the horse over the long term.

An excellent grip prevents the horse from slipping when the ground conditions are extreme.

Far fewer horseshoe studs are lost out on the course and the horseshoe threads do not get damaged, which, besides ensuring safety, is a very important cost factor.

## INCOMPARABLE

Developed by highly experienced riders and engineers for safe competitive sport riding. Our horseshoe studs have optimal shock-absorbing properties that take the load off the joints and musculoskeletal system of the horse during any activity on any type of ground.
